THE CONTROL CHALLENGE

MANUAL COORDINATION

FRAGMENTED APPROVALS

LIMITED VISIBILITY

DIFFICULT RECONCILIATION

DELAYED REPORTING

Management needs to know **who is inside, what is outside, what has returned, what is pending** — and **who authorized it**.

From Gate Register to Digital Control

REQUEST

APPROVAL

VERIFICATION

GATE MOVEMENT

TRACKING

CLOSURE

VISIBILITY

One lifecycle, applied to both streams. The object changes — the discipline does not.

PEOPLE

Visitor Management

Authorization, entry and exit — recorded per visitor, attributed to an approver.

MATERIAL

RGP / NRG

Returnable and non-returnable movement — each item traceable to a pass.

MANAGEMENT

Dashboard · Audit · Reports

One picture of both streams.
Exceptions surfaced, not searched for.

Every movement becomes **authorized**, **traceable** and **visible**.

One Platform. Two Critical Workflows.

PEOPLE MOVEMENT

Visitor Management System

Who enters, on whose authority, and when they leave

- PRE-REG
- APPROVE
- VERIFY
- CHECK-IN
- TRACK
- CHECK-OUT

Controlled Access	Host-approved entry only
Visitor Visibility	Expected · inside · departed
Faster Gate Operations	Pre-approved arrivals
Complete Visitor History	Searchable, exportable

MATERIAL MOVEMENT

Material Gate Pass Management

What leaves, on whose authority, and what must come back

- REQUEST
- APPROVE
- GATE OUT
- TRACK
- RETURN
- RECONCILE

Material Authorization	Department-head raised
Gate Verification	Physically checked, logged
RGP Accountability	Returns tracked per line
NRGP Traceability	Permanent exit on record

Together, the two systems create a **single digital view of movement** through the organization's gates.

Visitor Management

Controlled people movement — authorization through exit

01	Pre-registration	Raised in advance
02	Host Approval	Named authorizer
03	Visitor Arrival	Expected at the gate
04	Identity Verification	ID checked at entry
05	Check-in	Visit becomes active
06	Visit	Visible as on site
07	Check-out	Closed and recorded

CAPTURE BEFORE PRESENTATION

Material Gate Pass

Controlled material movement — does it come back?

RGP RETURNABLE GATE PASS

Material is expected to return — and the pass stays open until it does.

REQUEST APPROVE GATE OUT OUTSIDE RETURN CLOSED

- ✓ Know what went out
- ✓ Know what came back
- ✓ Know what remains outstanding

NRGP NON-RETURNABLE GATE PASS

Material is not expected to return — so authorization at the gate is the control.

REQUEST APPROVE VERIFY GATE OUT CLEAR CLOSED

- ✓ Authorized — raised by a department head
- ✓ Verified — physically checked at the gate
- ✓ Traceable — permanent exit on record

RGP controls returnability. NRGp controls permanent outward movement.

One Visitor. End to End.

SCENARIO · A VENDOR IS SCHEDULED TO MEET THE HR HEAD

- | | | |
|----|--------------|-----------------------------|
| 01 | Pre-register | Visitor details captured |
| 02 | Approve | Host authorizes the visit |
| 03 | Arrive | Visitor reaches the gate |
| 04 | Verify | Security verifies identity |
| 05 | Check-in | Visit becomes active |
| 06 | Monitor | Visible as currently inside |
| 07 | Check-out | Visit closed and recorded |

WHAT MANAGEMENT GETS

- Who is expected — before they arrive
- Who is inside — right now
- Who has left — with the time
- What is pending a decision
- What happened — on the record, afterwards

| One visitor. Seven steps. Nothing on paper.

From Gate-Out to Final Closure

RGP-00125 3 laptops sent for repair

CLOSED

ITEM	SENT	RETURNED	OUTSTANDING
Laptop A	1	1	0
Laptop B	1	1	0
Laptop C	1	1	0

- APPROVED
- GATE OUT
- OUTSIDE
- RETURNED
- CLOSED

NRGP · PERMANENT EXIT

- 01 Request
- 02 Approval
- 03 Gate Verification
- 04 Gate Out
- 05 Clearance

⚠ The exception — only two come back

PARTIALLY RETURNED

The pass does not close. The obligation stays visible.

This is where the system moves beyond **pass generation** into **material accountability**.

One Screen. One Operational Picture.

The platform is designed to provide a centralized operational picture of the gate — people and material, in one place.

From Evaluation to Implementation

01 · ENTERPRISE CONTROL

ACCESS

Role-based access — guard, department head, admin, executive

GOVERNANCE

Defined approval workflows before any movement is permitted

AUDIT

Traceable activity history — actions attributed and timestamped

SECURITY

Authentication and server-enforced authorization on every record

02 · IMPLEMENTATION

DISCOVER

CONFIGURE

INTEGRATE

PILOT

TRAIN

GO-LIVE

OPTIMIZE

Sequence confirmed. Duration to be agreed in discovery.
